

The Association of Consulting Foresters, the University of Florida, and the Society of American Foresters are pleased to host a program on this important part of Florida's past, present, and future-

# Turpentine in Florida

## Past, Present, Future?

In 1913, Florida led the nation in turpentine production, and the industry had a tremendous impact on the economy, ecology, and culture of the state. Since the 1950s, the industry has evolved, but not disappeared. The use of pine-derived chemicals is still a major industry across the Southeast. New methods and technologies have the potential to continue to evolve the industry, and create opportunities for landowners.

**Austin Cary Forest**  
Friday, Oct. 13, 2017  
9:30 a.m.-3:30 p.m.

**Catered lunch provided.** Two category-one, and four category-two CFEs, will be available. Space for chapter meetings available before or after the program.
